

TRUFLEX™ CANOLA APPLICATION WINDOW

*Bayer's recommendations for ideal application timing.

GET THE MOST FROM YOUR TRUFLEX CANOLA

To maximize your results, spray the first application of 0.67 L/ac. between cotyledon and two leaf stage. This sets your crop up for the best start possible and helps it achieve its maximum yield potential. If another treatment is required, you have the flexibility to apply another application of 0.67 L/ac. up to first flower. If spring weather doesn't cooperate or you experience delays, use one application of 1.33 L/ac. up to six leaf stage.

USE ROUNDUP WEATHERMAX FOR IMPROVED WEED CONTROL

Dandelion

Wild buckwheat

Foxtail barley

Being able to apply Roundup WeatherMAX® herbicide in-crop at 0.67 L/ac. for two applications or 1.33 L/ac. for a single application allows for the control of 24 more weed species than is possible with the Roundup Ready® canola system, including dandelion, wild buckwheat and foxtail barley, among many others.

FOR BEST RESULTS

2×
0.67 L/ac.
Between
Cotyledon and 1st flower

OR

ALTERNATIVE OPTION

1×
1.33 L/ac.
Between
Cotyledon and 6 leaf
